Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Magnesium Oxide Single Crystal Substrate competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Magnesium Oxide Single Crystal Substrate is a planar functional material fabricated from high-purity magnesium oxide (MgO) via crystal growth techniques, characterized by a single-crystalline lattice orientation. Its cubic rocksalt-type symmetry, atomically flat surface, and low defect density render it an ideal substrate for epitaxial growth of two-dimensional materials, investigations of surface physics, and heterostructure fabrication. The substrate exhibits high transparency in the deep ultraviolet range and chemical inertness against most acidic/basic environments while maintaining lattice stability at elevated temperatures. Its physical properties, closely tied to electron-phonon coupling mechanisms, demonstrate potential in phonon engineering, magneto-optical devices, and quantum information processing, particularly for functional device integration platforms requiring synergistic optimization of low dielectric loss and high thermal conductivity.

The global Magnesium Oxide Single Crystal Substrate market size was estimated at USD 59.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 11.00% during the forecast period.
