Abstracts

Magnesium oxychloride cement, also known as Sorel cement, is an inorganic cementitious material formed by the reaction of magnesium oxide (MgO) with a concentrated solution of magnesium chloride (MgCl₂), resulting in a binder with unique properties such as rapid setting, high early strength, excellent fire resistance, and good abrasion resistance. It is primarily used in applications requiring lightweight, non-combustible, and chemically resistant materials, including industrial flooring, fireproof panels, grinding wheels, and decorative architectural elements, though its susceptibility to water degradation limits its use in outdoor or high-moisture environments without protective coatings or modifiers.

The global Magnesium Oxychloride Cement market size was estimated at USD 320.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.75% during the forecast period.
