Abstracts

Magnesium silico fluoride is an inorganic compound primarily utilized as a flocculant and coagulant in water treatment processes, where it aids in the removal of suspended particles, colloidal matter, and impurities by promoting aggregation and sedimentation. It also finds application as a fire retardant in certain materials, a component in ceramics and glass manufacturing to modify melting points and enhance durability, and occasionally in metal surface treatment for corrosion resistance. Its role is distinct from other fluorides due to the synergistic effect of magnesium and silicon, which can improve performance in specific industrial contexts, though its use is often governed by stringent environmental and safety regulations due to fluoride content.

The global Magnesium Silico Fluoride market size was estimated at USD 125.6 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.80% during the forecast period.
