Abstracts

The magnetic activated tumor cell sorter is based on the magnetic activated cell sorting (MACS), which uses magnetic beads to separate tumor cells according to cell surface markers. Magnetic beads are coated with specific antibodies targeting surface markers of target cells. When tumor cells are incubated with magnetic beads, the beads bind to the target cells. Subsequently, tumor cells separate magnetically labeled cells from unlabeled cells through a magnetic field, which has the characteristics of simplicity, speed, and high purity. This instrument is widely used in research fields such as tumor biology and tumor immunology. The magnetic activated tumor cell sorter has been widely used in the field of cell sorting, especially in biomedical research, drug development, clinical diagnosis, and cell therapy, due to its advantages of easy operation and good protection of cell viability. The market has shown a rapid growth trend in recent years, and it is expected to continue to maintain stable growth in the coming years. The main driving forces include the rise of personalized medicine and precision therapy, as well as the continuous development of biomedical research and clinical applications. In the market, imported brands still dominate. BD Biosciences, Beckman Coulter, and Miltenyi Biotec, as key manufacturers in this field, have advantages in technology and services, and are expected to continue to lead in the future, continuously improving the sorting efficiency, accuracy, and operability of instruments, providing researchers with more advanced, efficient, and accurate cell sorting tools. In addition, companies such as Cellbri, STEMCELL, and Akadeum also have a place, with significant room for improvement and opportunities.

The global Magnetic Activated Tumor Cell Sorter market size was estimated at USD 1880.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.40% during the forecast period.
