## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Magnetic Broach Drill competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global sales of magnetic broach drills were approximately 472,000 units, with an average price of about \$895 per unit; the typical gross margin at the manufacturing end was about 18%–26%. Magnetic broach drills are a type of portable or benchtop metal drilling equipment. The core is fixed by a powerful electromagnetic base and is equipped with a core bit (annular cutter) for quickly drilling holes in steel plates and structural components. Common general parameters include: maximum bore diameter (commonly 12–150 mm, larger sizes available), maximum bore depth (typically 25–150 mm and above), main machine power (ranging from 700 W to 2,000+ W), no-load speed range (approximately 200–2,000 rpm, with multiple speed settings), magnetic force (typical magnetic force 5,000–25,000 N, used to ensure the drill press is fixed on vertical/inclined steel surfaces), and spindle interface (M16/19.05 mm or 3/4"). The specifications include bore diameter, cooling method (internal/external cooling/circulating cooling), safety features (magnetic detection, limit switch, thermal protection, clutch anti-jamming function), and accessories (guide frame, chip disc, gearbox, gear grinder, etc.). The market offers both lightweight models (lower prices) for construction/steel structure installation and heavy-duty models for in-plant production (more powerful, equipped with automatic feed and CNC interface). Prices and configurations vary significantly (many models are available online and from professional dealers, with retail prices ranging from hundreds to thousands of US dollars). Upstream components mainly include motors and electronic controls (motors, gearboxes), magnets and iron cores, aluminum/cast iron bodies, gears/guide rails and hollow drill bits (high alloy steel/carbide tools), as well as power supplies and safety

sensors; downstream components include professional construction service providers and equipment rental companies in building construction, oil and gas pipeline installation, steel structure manufacturing, shipbuilding and repair, electromechanical installation and maintenance, etc. The demand for magnetic broach drills is likely to be greater in the coming years, which will drive the market demand for more advanced magnetic drilling machines. The drill press industry is expected to grow rapidly globally. The growing demand for automated drilling machines and the rapid expansion of industrial production industries are driving the growth of the global magnetic drilling machines market. In addition, as the industrial sector continues to expand, more and more workshops are using drilling machines. This factor is driving the growth of the global drilling machines market.

The global Magnetic Broach Drill market size was estimated at USD 422.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.10% during the forecast period.
