Report Overview

Capsule endoscopy is a procedure used to record images of the inside of the gastrointestinal tract for medical diagnosis. Newer advances are also able to biopsy and release drugs at specific locations throughout the GI tract. The capsule is similar in shape to a standard drug capsule, but slightly larger, and contains a tiny camera and a battery-powered LED array. After the patient swallows the capsule, it passes along the gastrointestinal tract, taking a large number of images every second, which are transmitted wirelessly to a series of receivers connected to a portable recording device worn by the patient. The main use of capsule endoscopy is to examine areas of the small intestine that cannot be seen with other types of endoscopy, such as colonoscopy or esophagogastroduodenoscopy.
