## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Magnetic Chalkboard competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. A Magnetic Chalkboard is a dual-function surface that combines a traditional chalkboard writing layer with a ferromagnetic backing, allowing it to attract magnets for holding notes, charts, and accessories. The writing surface is typically made of steel sheet coated with porcelain enamel, melamine, or resin-based paint, which provides a smooth, erasable finish. The core structure may use a magnetic steel substrate or an MDF board with a bonded steel sheet, backed by an aluminum or polymer frame. The supply chain begins with raw materials such as cold-rolled steel, ferrite powder, resins, and coatings, supplied by metal and chemical producers. These materials move to intermediate processors for enamel coating, lamination, and surface finishing. Final assembly is handled by board and furniture manufacturers who integrate framing, mounting systems, and packaging. Distribution flows through educational and office supply wholesalers, retailers, and e-commerce channels to end users in schools, offices, and homes. In 2024, global magnetic chalkboard production totaled about 38 million units with a capacity near 47 million units annually. Priced at USD 18?160 per unit depending on size, substrate, and frame quality, the market maintained an average gross margin of 28%.

The global Magnetic Chalkboard market size was estimated at USD 720.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.30% during the forecast period.
