Abstracts

Magnetic chute separators are industrial devices designed to automatically and continuously remove ferrous contaminants from free-flowing materials such as grains, powders, granules, and other bulk solids. They consist of a chute or housing through which material passes, with strategically placed high-strength magnets—often rare-earth magnets—that attract and capture ferrous particles. These separators are valued for their efficiency, minimal maintenance requirements, and ability to integrate seamlessly into production lines without interrupting material flow. They are commonly used in food processing, pharmaceuticals, chemicals, plastics, and recycling industries to ensure product purity, protect downstream equipment, and comply with safety and quality standards.

The global Magnetic Chute Separator market size was estimated at USD 35.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.85% during the forecast period.
