Abstracts

Magnetic coreless current sensor is a device used to measure current that uses changes in the magnetic field to sense current, rather than relying on a traditional iron core structure. This sensor is able to achieve high-precision current measurement by detecting the magnetic field generated around the conductor, with a wide frequency response and excellent linearity. Due to its coreless design, magnetic coreless current sensors generally have high durability and anti-interference capabilities, and are suitable for a variety of fields such as power monitoring, industrial automation, and electric vehicles. Its lightweight design and small size make it widely used in modern electronic devices.

The global Magnetic Coreless Current Sensor market size was estimated at USD 717.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 10.40% during the forecast period.
