## Abstracts

The capsule endoscopy robot system project is the world's first actively controlled capsule endoscopy robot system technology. There is a major technological breakthrough for the actively controlled second-generation capsule endoscopy robot, which can significantly improve inspection results and performance through precise control and positioning. It is reliable, the examination of the stomach is very convenient, fast and comprehensive. Its product mainly consists of four parts: a magnetic field precise control system, a smart capsule endoscope, a portable recorder and a capsule locator. The person undergoing the examination needs to swallow a smart "capsule", and a comprehensive examination of the stomach can be achieved in about 15 minutes. . Capsule endoscopy robot gastroscopy is highly efficient and complementary to traditional gastroscopy. The capsule can be used for one time without the risk of cross-infection, pain, injury, anesthesia, or psychological barriers. It can complete a full range of gastric and small intestine examinations without blind spots, and is suitable for gastric examination. Health screening for gastrointestinal diseases and early cancers in the head and small intestine. The magnetic drive capsule robot has gained increasing attention in recent years, particularly in medical applications where it demonstrates significant potential. The current market focuses primarily on scenarios such as gastrointestinal endoscopy, drug delivery, and minimally invasive surgery. These robots are gradually replacing traditional methods due to their efficiency and improved patient comfort. However, high technological costs and the complexities of clinical adoption have kept market penetration relatively low, slowing the pace of development. In the future, development trends in this field are expected to center around further technological optimization and the diversification of application scenarios. The precision and safety of magnetic drive technology will continue to improve, enabling higher-resolution imaging, more complex operations, and enhanced patient safety. Additionally, with the integration of artificial intelligence and IoT technologies, capsule robots are

likely to achieve greater automation and enable remote monitoring, enhancing diagnostic efficiency while reducing healthcare costs. The market is driven by the growing demand for medical innovation and the continuous advancement of technology. On one hand, the aging population and rising prevalence of chronic diseases are driving the need for more efficient and less invasive diagnostic solutions. On the other hand, increased investments and collaborations between technology companies and medical institutions are accelerating the maturity of related technologies. Nevertheless, significant challenges persist, including high research and manufacturing costs, stringent regulatory approval processes, and the acceptance of new technology by both doctors and patients. These factors may limit market expansion in the short term.

The global Magnetic Drive Capsule Robot market size was estimated at USD 437.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 18.60% during the forecast period.
