Abstracts

Magnetic drive gear pumps are a specialized type of centrifugal pump designed for handling hazardous, corrosive, or high-purity fluids without risk of leakage. They operate using a hermetically sealed system where the impeller is driven by magnetic coupling rather than a direct mechanical shaft, eliminating the need for dynamic seals that are prone to wear and failure. This design ensures zero leakage, reduces maintenance requirements, and enhances operational safety, making them ideal for applications in chemical processing, pharmaceuticals, food and beverage, and water treatment industries where fluid containment is critical.

The global Magnetic Drive Gear Pump market size was estimated at USD 253.75 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.45% during the forecast period.
