Abstracts

The Magnetic Float Level Gauge Indicator is an instrument used to measure the level of liquid in tanks or vessels. It consists of a buoyant float equipped with a magnet that moves vertically along a metal guide tube attached to the tank. As the liquid level changes, the float also moves, and the magnet inside the float changes position with respect to the indicator assembly outside the tank. This causes the indicator to show the corresponding level of the liquid. Magnetic Float Level Gauge Indicators are known for their accuracy, reliability, and suitability for high-temperature and high-pressure environments. They find applications in industries such as oil and gas, chemical processing, and water treatment for level monitoring and control.

The global Magnetic Float Level Gauge Indicator market size was estimated at USD 380.45 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.85% during the forecast period.
