Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Magnetic Glue Inductor competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, the global output of Magnetic Glue Inductor is expected to be 6.63 billion pieces, with an average selling price of US\$0.2 per piece. Magnetic glue inductors are encapsulated with magnetic glue material (typically a mixture of ferrite or alloy powder and a binder). They offer high magnetic permeability, low loss, and excellent shielding properties. Their core structure is typically wire-wound or integrally molded, with the magnetic glue coating the coils, effectively improving the inductor's anti-interference capabilities and thermal stability. Compared to traditional inductors, magnetic glue inductors offer higher saturation current, smaller size, and improved heat dissipation, making them widely used in high-frequency, high-current-density power management systems. The magnetic glue inductor market is experiencing accelerated growth, benefiting from the increasing adoption of electric vehicles, the trend toward miniaturization, the widespread application of high-frequency communication technologies (such as 5G and wireless charging), and the strong demand for high-efficiency inductors in renewable energy systems. With the continuous advancement of magnetic glue materials and integrated molding technology, the industry's technical barriers are gradually rising, and competition is intensifying. In the future, the application of wide-bandgap semiconductors (such as GaN and SiC) in power electronics will further drive the evolution of magnetic glue inductors towards high frequency, high current, and high temperature, making them key components in next-generation power management systems.

The global Magnetic Glue Inductor market size was estimated at USD 1326.0 million in

2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.00% during the forecast period.
