## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Magnetic Immunosolid Phase Extractor competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global production of magnetic immunosolid-phase extraction (SPE) instruments reached 2,125 units, with an average selling price of US\$91,257 per unit. A magnetic immunosolid-phase extraction (SPE) instrument or system is used for sample pretreatment. It combines the advantages of immunoaffinity (specific binding between antibodies and antigens) and magnetic solid-phase materials to achieve selective enrichment of target substances and removal of impurities through magnetic separation. The core concept is to add magnetic particles with specific binding capacity (usually magnetic microspheres or magnetic resins modified with antibodies or ligands) to the sample, allowing the target molecules to selectively bind to the magnetic particles. Magnetic separation is then used to achieve enrichment, washing, and decoupling detection.

The global Magnetic Immunosolid Phase Extractor market size was estimated at USD 194.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.30% during the forecast period.
