Report Overview

Magnetic ink, also known as magnetic ink or magnetic ink, is a special ink containing magnetic material particles. Its magnetism mainly comes from the magnetic pigments added to the ink, such as black iron oxide (Fe_3O_4) and brown iron oxide (Fe_2O_3). Most of these magnetic pigments are needle-shaped crystals less than $1\mu\text{m}$. After being treated with a magnetic field, they are easily arranged with magnetism and obtain high residual magnetism. When these magnetic pigments are added to the ink, the ink produced becomes magnetic and can be used in various occasions that require magnetic recording or identification. The presence of magnetic ink can be detected by a magnetic detector, which makes it widely used in the banking system, postal business and other fields. For example, in the banking system, using magnetic ink to print characters on checks can realize the automatic processing of checks and other banking business, improve work efficiency and reduce human errors. In addition, magnetic ink is also widely used in the production of magnetic printed materials such as tickets, monthly tickets, stamps, bank passbooks, and identity cards.
