Abstracts

Magnetic isolation digital isolators are a type of digital isolator that use magnetic components to achieve electrical isolation to prevent direct transmission of electrical signals. These magnetic components usually include transformers or magnetic conductors that transmit signals through magnetic induction. Magnetic digital isolators are widely used in the electronic field to isolate different circuits, improve system stability, prevent interference and improve safety. As technology continues to advance, magnetic isolation digital isolators may tend to become smaller and more integrated to accommodate the size and performance requirements of modern electronic devices. The increasing awareness of energy conservation and environmental protection may promote the low-power design of magnetic isolation digital isolators to adapt to the increased requirements for energy efficiency.

The global Magnetic Isolation Digital Isolator market size was estimated at USD 1070.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.20% during the forecast period.
