Abstracts

Magnetic Liners are wear-resistant inner linings used in mills, such as ball mills and semi-autogenous mills. They are made by combining high-strength wear-resistant materials with permanent magnets or electromagnets. By using magnetic force to adsorb grinding media and materials, they form a dynamic protective layer, reducing direct friction and prolonging the service life of the equipment. They are widely used in mining, building materials, power and other industries.

The global Magnetic Liners market size was estimated at USD 267.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.80% during the forecast period.
