A magnetic lock (or maglock) is an electromagnetic locking device that uses magnetic force to secure doors or gates. It consists of an electromagnet attached to the door frame and a metal armature plate installed on the door. When power is supplied to the electromagnet, it creates a strong magnetic field that attracts the armature plate, locking the door. Magnetic locks are commonly used in access control systems, as they offer a high level of security and can be controlled remotely. They are often employed in commercial buildings, secure facilities, and locations requiring controlled access, as they can be integrated with card readers, keypads, or biometric systems.
