Report Overview

Both the gradient as well as radiofrequency coils help in boosting the performance of MRI machines. Gradient coil generates additional magnetic fields within three dimensions x, y, and z. These additional fields superimpose over the main magnetic field and provide spatially coded data that helps the computer to calculate image slice. Similarly, radiofrequency coil (RF coil) helps in boosting the reception of magnetic resonance signal. Some of these coils are capable of transmitting the signal while all can receive these signals. Strong signal helps in providing clear images through noise reduction, helping in improving the signal-to-noise ratio.
