Abstracts

Magnetic Ride Control (MRC) Suspension is an advanced adaptive suspension system that uses magnetorheological (MR) fluid in the shock absorbers to instantly adjust damping characteristics in response to road conditions and driving behavior. The MR fluid contains particles that align when exposed to a magnetic field, altering the fluid's viscosity and thus controlling the shock absorber's stiffness. This allows for real-time, continuous adjustments to optimize ride comfort and handling performance, offering a smoother ride on rough roads and enhanced stability during high-performance driving. MRC is commonly found in high-end luxury vehicles, sports cars, and performance trucks, providing a balance of comfort, control, and agility.

The global Magnetic Ride Control Mrc Suspension market size was estimated at USD 503.89 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 12.20% during the forecast period.
