Abstracts

Magnetic Sector Mass Spectrometer is a static mass spectrometer based on the principle of magnetic field deflection, and its core is composed of three parts: ion source, magnetic sector mass analyzer and ion detector. The mass analyzer uses a uniform fan-shaped magnetic field to separate and focus ion beams by Lorentz force, which makes charged ions move with specific curvature radius according to different mass charge ratio. Its resolution depends on the magnetic field design, with single-focus models typically having a resolution of 500-1000 (half peak width), while double-focused models can reach more than 10,000, suitable for high-precision isotope analysis and trace element detection.

The global Magnetic Sector Mass Spectrometer market size was estimated at USD 411.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.40% during the forecast period.
