### Report Overview

Magnetic Viewing Film, Sometimes also known as Green Magnet Viewing Film, is made from a plastic film that contains a ferromagnetic slurry of fine nickel particles that align themselves along magnetic field lines, used to show where magnetic pole faces exist on permanent magnets and direct current (d.c.) electromagnetic devices. This green magnetic viewing film will become lighter or darker when a magnetic field is applied. It turns dark when the field lines are perpendicular the surface, and it turns light when the field lines are horizontal, i.e., across the surface allowing the user to see the magnetic field around a magnet.
