Abstracts

Magnetic Drive Intelligent Control Flexible Systems typically consist of two components: stator tracks and intelligent movers. Coils embedded within the stator tracks generate electromagnetic forces when energized, interacting with permanent magnets on the movers to propel them freely along the tracks. Movers require no cable connections, enabling precise docking and movement at any position along the track. Each mover can be independently controlled, offering high speed, high precision, and high flexibility.

Development Trends

High Precision: As manufacturing demands increasingly stringent product accuracy, magnetic-driven intelligent flexible systems will evolve toward higher precision, with continuous improvements in repeatability and positioning accuracy.

Intelligent Capabilities: Integrating AI and big data analytics enables smart equipment monitoring, self-diagnostics, and energy optimization. Systems can automatically adjust operating parameters based on production rhythms, enhancing overall efficiency.

Modularization: Adopting modular designs facilitates quicker system integration and expansion. Flexible configurations tailored to customer needs reduce costs and shorten delivery cycles.

Application Fields

Automotive Manufacturing: Used in assembly and conveying of automotive components, enabling rapid production line changeovers and flexible manufacturing to boost efficiency and product quality.

3C Electronics: Suited for precision assembly and inspection of electronic products, meeting demands for high accuracy, speed, and flexibility in production lines for devices like smartphones and computers.

Food & Beverage Packaging: Enables high-speed, precise conveying and packaging of food and beverages, accommodating diverse product specifications while offering easy cleaning and maintenance compliant with food hygiene standards.

Medical Devices: Employed in precision component machining, assembly, and pharmaceutical packaging during medical device production, ensuring high accuracy and reliability throughout the manufacturing process.

Semiconductors:
