## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Magnetocaloric Materials competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Magnetocaloric materials are substances that undergo a temperature change when exposed to a varying magnetic field, a phenomenon known as the magnetocaloric effect (MCE). This effect arises from the interplay between the material's magnetic and thermal properties, where magnetization reduces magnetic entropy and releases heat, while demagnetization increases entropy and absorbs heat, leading to cooling. These materials are primarily used in magnetic refrigeration systems as an energy-efficient and environmentally friendly alternative to conventional gas-compression cooling. Common examples include gadolinium (Gd),  $Gd_2(Si_2Ge_2)$ ,  $La(Fe,Si)_2$ , and Heusler alloys, with peak MCE observed near their magnetic phase transition temperatures, such as the Curie point. The magnetocaloric materials market is an emerging sector driven by the global push for energy-efficient and environmentally friendly cooling technologies, particularly magnetic refrigeration. These materials, which exhibit temperature changes under magnetic fields, offer a solid-state alternative to traditional gas-compression refrigeration. With applications in commercial refrigeration, industrial cooling, medical systems, and potentially automotive air conditioning, the market is projected to grow rapidly. Key growth factors include tightening environmental regulations, rising energy costs, and ongoing R&D into cost-effective, rare-earth-free materials. However, challenges such as high material costs, limited scalability, and immature supply chains still hinder widespread commercialization.

The global Magnetocaloric Materials market size was estimated at USD 79.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 9.20%

during the forecast period.
