Abstracts

Magnetoresistive heads are thin-film magnetic sensors used in hard disk drives to read data by detecting changes in electrical resistance that occur when the head passes over magnetized regions on the disk's surface; they operate based on the magnetoresistance effect, where the electrical resistance of certain materials changes in the presence of a magnetic field, enabling higher data density and improved signal sensitivity compared to earlier inductive head technologies.

The global Magnetoresistive Heads market size was estimated at USD 520.75 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.
