Report Overview:

Magnetostrictive linear displacement sensors measure the distance between the position magnet and the head end of the sensing rod. They provide highly accurate and reliable position control signals for demanding industrial (automation) environments. Based on the Weidmann effect between the magnetostrictive waveguide wire and the vernier magnetic ring, the core detection element of the sensor, the absolute position of the movable magnetic ring is accurately detected through the internal non-contact measurement and control technology to measure the actual displacement value of the detected product.

The Global Magnetostrictive Linear Displacement Sensors Market Size was estimated at USD 181.38 million in 2023 and is projected to reach USD 269.16 million by 2029, exhibiting a CAGR of 6.80% during the forecast period.
