Report Overview

The main bolt hole comb is a device used for maintenance and repair of large machinery such as engines and turbines. It is used to clean the bolt holes on the main bearing cover and other parts of the machine. Bolt hole combs are usually made of high-strength steel and have a series of combs or brushes used to clean debris and other pollutants in bolt holes. A comb or brush is connected to a handle or other mechanism, allowing users to insert the device into bolt holes and rotate to clean the threads. The main bolt hole comb is an important tool for maintenance and repair of large machinery, as it helps to ensure correct tightening and fixation of bolts. If debris or other contaminants are left in the bolt hole, it may affect the torque value of the bolt, and lead to incorrect tightening, thus leading to mechanical damage, or even catastrophic failure.
