Abstracts

Main insulation piercing connectors are electrical components used for power cable connections. They are mainly used to connect the conductor of a cable to another cable or electrical equipment without removing the insulation layer of the cable. The connector has a unique structural design and uses a piercing method to pierce the insulation layer of the cable with an internal metal needle, directly contacting the conductor to achieve a conductive connection. Insulation piercing connectors are widely used in low-voltage and medium-voltage power systems, especially when branching, maintaining or expanding power lines.
