Abstracts

Mainframe development refers to the specialized practice of designing, building, testing, and maintaining software applications that run on mainframe computing systems, which are high-performance, high-reliability servers historically used for large-scale, mission-critical transaction processing and data management by industries such as finance, insurance, government, and healthcare. This discipline involves working with legacy programming languages like COBOL, PL/I, and Assembler, as well as modern languages such as Java, along with proprietary operating systems (e.g., IBM z/OS), database systems (e.g., DB2, IMS), and development tools (e.g., IBM Developer for z Systems), and it often emphasizes integration with newer technologies, security, scalability, and backward compatibility due to the long lifecycle and critical nature of mainframe-hosted applications. The market for mainframe development is characterized by steady demand driven by the enduring reliance of major enterprises on mainframe systems for core business operations, despite the broader industry shift toward cloud and distributed computing. Key players include IBM, which dominates the mainframe hardware and software ecosystem, along with specialized firms like BMC Software, Broadcom (CA Technologies), and Micro Focus that provide development, modernization, and management tools. Demand for mainframe developers remains strong due to a skills gap resulting from an aging workforce and a limited influx of new talent, leading to competitive salaries and opportunities for professionals with expertise in legacy systems. Emerging trends include the adoption of DevOps practices, integration with hybrid cloud environments, and increased focus on application modernization?enabling mainframes to interoperate with contemporary platforms?while security and regulatory compliance continue to be critical drivers. The market is relatively niche but financially significant, as organizations prioritize maintaining and evolving these systems rather than full migration due to the high cost, risk, and complexity involved.

The global Mainframe Development market size was estimated at USD 890.2 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of -1.50% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global Mainframe Development market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
