Report Overview

Maize gluten feed (MGF) is a byproduct derived from the wet milling process of corn, primarily composed of bran, steep liquor, and residual starch, making it a high-protein, energy-rich ingredient widely used in animal feed, particularly for ruminants, poultry, and swine.

The global market for MGF is driven by its cost-effectiveness as a protein supplement compared to alternatives like soybean meal, alongside rising demand for livestock products due to population growth and increasing meat consumption, especially in emerging economies. Key producers include major corn-processing regions such as the U.S., China, and Europe, with trade dynamics influenced by fluctuating corn prices, regulatory standards on feed safety, and sustainability concerns. Challenges include competition from other feed ingredients and variability in supply due to corn crop yields, while opportunities lie in optimizing production efficiency and expanding applications in aquaculture and pet food industries. Market trends also reflect a growing emphasis on circular economy practices, as MGF repurposes industrial byproducts into valuable feed resources.

The global Maize Gluten Feed market size was estimated at USD 2502.75 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 3.50% during the forecast period.
