Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Malate Dehydrogenase competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Malate dehydrogenase (EC 1.1.1.37) is a key oxidoreductase that catalyzes the reversible conversion of malate to oxaloacetate, accompanied by electron transfer of NAD⁺/NADH, and participates in the tricarboxylic acid cycle (TCA), gluconeogenesis, and mitochondrial energy metabolism. The enzyme is widely distributed in animals, plants, and microorganisms, and is divided into mitochondrial MDH (mMDH) and cytoplasmic MDH (cMDH) according to subcellular localization. Its high substrate specificity and stability make it an important tool enzyme for clinical diagnosis (such as myocardial infarction markers), food testing (juice adulteration analysis), and biosynthesis (such as C4 compound production).

The global Malate Dehydrogenase market size was estimated at USD 186.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.30% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global Malate Dehydrogenase market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
