Abstracts

Non-woven facial masks for men represent a specialized segment within the broader skincare market, consisting of single-use sheet masks designed specifically for male skin types, which typically differ from female skin in terms of thickness, oil production, and pore size. These masks are constructed from non-woven fabric—a synthetic textile made from bonded fibers—chosen for its ability to hold and evenly distribute serum formulations containing active ingredients such as hyaluronic acid, charcoal, tea tree oil, or vitamins targeted at concerns like hydration, oil control, acne prevention, and soothing post-shave irritation. Unlike traditional woven fabrics, non-woven materials are lightweight, cost-effective to produce, and offer high absorbency, making them ideal for delivering concentrated skincare benefits in a convenient, disposable format that aligns with the growing demand for efficient, results-oriented grooming solutions among male consumers.

The global Male Non Woven Facial Mask market size was estimated at USD 1230.45 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 7.80% during the forecast period.
