Report Overview

Maleic anhydride graft is a polymer obtained by grafting maleic anhydride with other materials under suitable temperature conditions. Generally, the grafting methods mainly include solution method, melting method, radiation method and solid phase method. Among them, the melting method is the most commonly used and the most important method. Due to the polar group aldehyde group provided by maleic anhydride and the non-polar chain segment of olefin, the maleic anhydride graft can be widely used in the modification of materials such as PA, PP and PE, wire and cable masterbatch, wood in the plastic industry, encapsulation TPE and hot melt adhesive industries, it mainly plays the role of coupling compatibility.
