Report Overview

Maltitol Liquid is made from high-quality starch, liquefied, saccharified, decolorized and filtered, and refined. It uses maltose as the main component. The main raw material for the manufacture of maltitol is maltose. Maltitol does not increase blood sugar and blood lipids after human intake, which can alleviate the condition of diabetic patients and cardiovascular and cerebrovascular patients, because the enzyme that breaks down maltose has only a very small part in the human body. So it does not cause changes in the body's blood sugar.
