Abstracts

Maltol and ethyl maltol are organic compounds classified as synthetic flavor enhancers and aroma chemicals, widely used in the food, beverage, fragrance, and pharmaceutical industries to impart a sweet, caramel-like, or fruity note, with ethyl maltol being approximately four to six times more potent than maltol due to its ethyl group substitution. These compounds are valued for their ability to enhance sweetness perception, mask undesirable off-notes, and round out flavor profiles, making them indispensable in products ranging from baked goods and confectionery to perfumes and oral care formulations, where they contribute to consumer acceptability and sensory appeal without significantly altering the base composition.
