Abstracts

Mammalian Biopharmaceutical Service refers to the specialized set of processes and support provided by biotechnology and pharmaceutical companies to develop, manufacture, and deliver therapeutic products produced using mammalian cell systems. These services typically involve the use of engineered mammalian cells?such as Chinese hamster ovary (CHO) cells, human embryonic kidney (HEK) cells, or NS0 myeloma cells?to express complex biologics like monoclonal antibodies, recombinant proteins, hormones, vaccines, and gene therapies that cannot be effectively produced in microbial or plant systems. Mammalian biopharmaceutical services cover a broad range of activities, including cell line development, upstream and downstream process optimization, large-scale bioreactor production, purification, analytical testing, regulatory support, and fill-finish operations. These services are critical because mammalian cells provide the necessary post-translational modifications (such as glycosylation) required for the biological activity, stability, and safety of many biopharmaceutical products. By leveraging advanced technologies, strict quality controls, and compliance with Good Manufacturing Practices (GMP), mammalian biopharmaceutical service providers help bring life-saving biologic drugs from research to commercial production, serving therapeutic areas like oncology, immunology, rare diseases, and infectious diseases.

The global Mammalian Biopharmaceutical Service market size was estimated at USD 18450.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 7.50% during the forecast period.
