Report Overview:

Speaker cloth or speaker fabric (it's also referred to as grille cloth, acoustic cloth, or speaker mesh) is specifically designed to allow for easy sound transmission through the material. The thing is—just about all fabric will let some sound through (called sound transmissibility), but speaker fabric is specially made to equally allow all frequencies through from 20Hz to 20 kHz. It also is available in a variety of colors to match the aesthetics or look a loudspeaker manufacturer (or interior designer) is trying to achieve. Most of the fabric used in speaker cloth or grille cloth is made from synthetic materials or threads (100% polyester is not uncommon) in an open weave pattern where warp threads never come together. This leaves the cloth very open with vast spaces in the fabric. If you looked at speaker cloth closely under a magnifying glass or microscope you'd see lots of square openings for sound to penetrate. Many of these materials are also flame retardant and even mildew proof so that moisture is allowed to pass through and any heat generated from the driver doesn't build up under the fabric. Most speaker cloth materials have excellent fade resistance, and most can be cleaned with a vacuum brush.

Speaker Grille Cloth is designed and engineered for sound transmissibility and an aesthetic appearance, and the speaker grill cloth make it suitable for a wide variety of applications. The engineered fabric construction of the fabric allows sound to pass through the synthetic threads with minimum interference. The result is a top quality speaker grill cloth engineered for sound reproduction.

Speaker Grill Cloth is suitable for covering speakers in a range of applications including organ lofts, auditoriums, sports arenas or home audio systems. Speaker Grill Cloth is

flame retardant, mildew proof, approved for outdoor use, has excellent fade resistance and is easily cleaned by vacuuming or washing. Fabrics will not fray at the edges after cutting.
