Man-Overboard (Mob) System is a man-overboard alarm system designed for sailing or water activities. By integrating advanced sensor technology and positioning technology, the system can quickly trigger an alarm when a person falls into the water and record the geographical location information at the time of falling into the water. Once activated, the Man-Overboard (Mob) System will send the location information of the person who falls into the water to nearby ships, aircraft, lifeboats or shore stations, so that rescuers can quickly and accurately locate the person who falls into the water and carry out rescue.
