Report Overview

An anti-tank missile (ATM), anti-tank guided missile (ATGM), anti-tank guided weapon (ATGW), or anti-armour guided weapon is a guided missile primarily designed to hit and destroy heavily armoured military vehicles. ATGMs range in size from shoulder-launched weapons, which can be transported by a single soldier, to larger tripod-mounted weapons, which require a squad or team to transport and fire, to vehicle and aircraft mounted missile systems. The introduction of smaller, man-portable ATGMs, such as the M47 Dragon and FGM-148 Javelin, with larger warheads to the modern battlefield has given infantry the ability to defeat light and medium tanks at great ranges, though main battle tanks using composite and reactive armours have proven to be resistant to smaller ATGMs. Earlier infantry anti-tank weapons, such as anti-tank rifles, anti-tank missiles, and magnetic anti-tank mines, had limited armour penetration abilities and/or required a soldier to approach the target closely. See: List of anti-tank missiles.
