Abstracts

Managed SASE Service refers to the outsourced delivery and operation of a SASE architecture, where a service provider manages the integration of networking and security functions (like SD-WAN, Secure Web Gateway, CASB, ZTNA, FWaaS, etc.) through a unified, cloud-native platform. It enables organizations to securely connect users to applications regardless of location without having to manage the underlying infrastructure or security tools themselves. Managed SASE Service involves outsourcing the delivery and management of the Secure Access Service Edge (SASE) framework. SASE converges networking (like SD-WAN) and security functions (like ZTNA and SWG) into a unified, cloud-delivered architecture. The managed service model removes the complexity of implementing and maintaining this converged platform, providing consistent security and optimized access for globally distributed users and assets. The foremost growth driver is the entrenched shift to hybrid and remote work, which permanently dissolved the traditional network perimeter. With users accessing critical applications from anywhere on diverse devices, organizations require a location-agnostic security model that Managed SASE delivers natively, moving security controls to the cloud edge rather than backhauling traffic to a data center. A second significant catalyst is the growing cybersecurity threat complexity coupled with IT skill shortages. As threats evolve rapidly, in-house teams struggle to keep pace; outsourcing to a managed provider grants immediate access to specialized expertise, continuous threat intelligence, and 24/7 monitoring, effectively bridging internal talent and capacity gaps while ensuring timely security posture updates. The future market potential is highly favorable due to the inevitable drive toward vendor consolidation and platform simplicity. Customers are increasingly prioritizing single-vendor solutions that natively integrate all required networking and security components, which minimizes integration headaches, reduces policy sprawl, and streamlines operational overhead compared to assembling a stack from multiple point solutions.

The global Managed SASE Service market size was estimated at USD 2055.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.40% during the forecast period.
