Abstracts

Mandelic acid, an alpha-hydroxy acid (AHA) derived from bitter almonds, is widely recognized in the skincare industry for its gentle yet effective exfoliating, antibacterial, and brightening properties, making it particularly suitable for individuals with sensitive or acne-prone skin due to its larger molecular size, which allows for slower penetration and reduced irritation compared to other AHAs. Products containing mandelic acid span a diverse range of formulations, including toners, serums, peels, and creams, and are positioned to address concerns such as hyperpigmentation, fine lines, uneven texture, and mild to moderate acne, often marketed as a versatile, multitasking ingredient suitable for both professional clinical treatments and at-home skincare routines.

The global Mandelic Acid Products market size was estimated at USD 85.42 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 7.15% during the forecast period.
