Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Mandrel Release Lubricant competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Mandrel Release Lubricant is a specialized agent applied to the surface of a mandrel to form a barrier that prevents bonding between the mandrel and the molded material (such as rubber, composites, or thermoplastics) during manufacturing processes. In addition to release functionality, it provides lubrication, reducing friction during forming, improving demolding efficiency, extending mandrel lifespan, and ensuring defect-free product surfaces. Common types include water-based emulsions, silicone-based, wax-based, or polymer composite lubricants, tailored for industrial products such as hoses, seals, aerospace tubing, automotive pipes, and high-pressure transport lines. With the advancement of industrial automation, the increasing complexity of molded materials, and stricter environmental regulations, the demand for efficient, low-VOC, easy-to-clean mandrel release lubricants continues to grow steadily.

The global Mandrel Release Lubricant market size was estimated at USD 260.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
