Abstracts

Manganese bisglycinate is a chelated form of manganese, a trace mineral essential for human health, in which manganese is bound to two glycine molecules to enhance bioavailability and absorption in the body. This specific formulation is primarily utilized in dietary supplements, functional foods, and nutraceuticals to address manganese deficiency, support bone health, aid in collagen formation, and contribute to antioxidant enzyme function. The market for manganese bisglycinate is a niche segment within the broader mineral supplements industry, driven by increasing consumer awareness of targeted nutrient supplementation, a growing focus on preventive healthcare, and the rising demand for highly bioavailable and gentle-on-the-stomach mineral forms. Key factors influencing this market include scientific research validating its efficacy, regulatory approvals for health claims, manufacturing advancements in chelation technology, and competition from other manganese sources and alternative mineral supplements. Geographically, demand is strongest in North America and Europe, where consumer education and supplement penetration are high, though growth is emerging in Asia-Pacific due to rising disposable incomes and health consciousness. The market remains relatively specialized but is expanding as formulators seek superior ingredients for premium supplement lines.

The global Manganese Bisglycinate market size was estimated at USD 185.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 7.50% during the forecast period.
