### Report Overview

Mannan-oligosaccharide, or MOS, is a highly effective oligosaccharide extracted from natural green plants. Similar oligosaccharides have a proliferation rate of 3-10 times for beneficial bacteria such as bifidobacterium, while oligosaccharides can reach more than 50 times, and are the only oligosaccharides in the current oligosaccharides family that can 'detoxification'. Low poly mannose can proliferate bacteria (mainly the bifidobacterium and lactobacillus), restrain to reduce the harmful bacteria, two-way regulating intestinal microecological balance, guarantee the dominance of beneficial bacteria, thus improve constipation and diarrhea, restore normal intestinal function, efficiently improve human immunity, prevention of knot, colorectal cancer and chronic diseases, for the three tenors, chronic diseases, such as the crowd has some auxiliary therapeutic effect. It is widely used in functional health care products. In addition, due to its good physical and chemical properties such as low heat, stability, safety and non-toxicity, as well as the role of protecting the intestinal tract and improving immunity, oligomaniacal mannose has been widely used as a feed additive in the feed industry abroad.

Global Mannan-oligosaccharide (MOS) key players include Lallemand, Orffa, FUBON, etc. Global top three manufacturers hold a share about 40%.
