## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Manned Hypobaric Oxygen Chamber competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. A manned hypobaric oxygen chamber is a medical device used to treat hypoxemia and altitude sickness. It provides a pressurized environment and oxygen-rich gas mixture to help the body replenish oxygen in a low-oxygen environment. This device simulates the high-altitude environment, promoting physical recovery and alleviating fatigue. By regulating the pressure and oxygen concentration within the chamber, it effectively improves blood oxygen levels. Upstream suppliers mainly include those providing the chamber's steel structure/composite materials, oxygen generation and supply equipment, air compressors and piping valves, environmental control (air conditioning and dehumidification), and electrical control and monitoring instruments. Downstream suppliers include end-users such as hospitals and rehabilitation institutions, high-altitude military units and construction companies, sports teams and health centers, as well as operation service providers. In 2024, the global market price for manned hypobaric oxygen chambers was US\$860,000 per unit, with sales of approximately 1,100 units and a global production capacity of 1,150-1,250 units. The industry profit margin was 25-30%.

The global Manned Hypobaric Oxygen Chamber market size was estimated at USD 946.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.00% during the forecast period.
