Report Overview

The most commonly used method for producing potassium sulfate is the Mannheim method, which is the reaction of potassium chloride and sulfuric acid at high temperature. Pour the raw materials into the center of a muffle furnace heated to above 600°C. Potassium sulfate and hydrochloric acid are produced in a two-step reaction by potassium bisulfate. This SOP approach accounts for 45% to 55% of global supply. The Mannheim process is also the most expensive processing technology due to the high input costs associated with purchasing MOP and sulfuric acid.
