Report Overview

A manual bordering machine is a tool used in the printing and bookbinding industry to create borders or edges on paper or cardboard. It is typically a handheld device that is operated manually by the user.

The machine consists of a metal plate with a raised border design, which is heated to a high temperature. The user places the paper or cardboard onto the plate and presses it down firmly, allowing the heat to transfer to the material and create a border or edge.

Manual bordering machines are commonly used to add decorative borders to invitations, business cards, certificates, and other printed materials. They can create a variety of border designs, including straight lines, curves, and intricate patterns.

These machines are often used in small-scale printing shops, craft studios, and bookbinding workshops. They offer a cost-effective and efficient way to add a professional and decorative touch to printed materials.
