A manual diverter valve is a mechanical device designed to control the flow direction of fluids?such as water, air, oil, or chemicals?within a piping system by manually redirecting the flow between two or more outlets. These valves are operated by levers, handles, or knobs, allowing users to manually select the desired flow path without the need for electrical or automated controls. Commonly constructed from materials like brass, stainless steel, or plastic to suit different pressure ratings and fluid compatibilities, manual diverter valves are valued for their simplicity, reliability, and cost-effectiveness.
