### Report Overview

A dual inline package switch (DIP switch) is a set of manual electrical switches designed to hold configurations and select the interrupt request (IRQ). DIP switches are used in place of jumper blocks. Most motherboards have several DIP switches or a single bank of DIP switches. Commonly, DIP switches are used to hold configuration settings.

There are many types of DIP switches. Two of the most common are:

**Slide and Rocker Actuator DIP Switches:** These are typical on/off switches with a SPST (single-pole, single-throw) contacts. They have a one-bit binary value with a standard ASCII character.

**Rotary DIP Switch:** This DIP switch has several electrical contacts which are rotated and aligned. They switches can be small or large and provide a selection of switching combinations.
