Report Overview:

The globe valve is suitable for use on a wide variety of applications, from flow rate control to open/close operation. In this type of valve, flow rate control is determined not by the size of the opening in the valve seat, but rather by the lift of the valve plug (the distance the valve plug is from the valve seat). One feature of globe valves is that even if used in the partially open position, there is less risk of damage to the valve seat or valve plug by the fluid than with other types of manual valves.

The Global Manual Globe Valves Market Size was estimated at USD 119.28 million in 2023 and is projected to reach USD 156.23 million by 2029, exhibiting a CAGR of 4.60% during the forecast period.
